

Supplier Sustainability

Through supplier audits, we can influence our suppliers; in addition to this we are setting clear demands on our suppliers (see CSR & Sustainability declaration)

Restricted material list

We work continuously to reduce our chemicals, with priority on the elimination of chemicals from the candidate list on the maintenance department. Through our chemical management system, we can identify all of our units' chemical risk and therefore work actively with the elimination and substitution.

REACH

We ensure before purchasing new materials that our suppliers meet the REACH Regulation. For more information see the tab on REACH.

RoHS 2

RoHS came into force on 1 July 2006 and RoHS 2 on 2 January 2013.

RoHS 2 has been incorporated by Swedish legislation with Regulation (2012: 861) on hazardous substances in electrical and electronic equipment, and Chemicals Agency (KIFS 2008: 2), chemical products and biotechnical organisms. We ensure that all our machines are CE marked on all our units. In addition to the CE mark, we are working with legislative compliance throughout the Group.
