PRESS RELEASE

Trioplast takes another step towards a circular economy with the launch of a manual stretch film made from 75% recycled material – of which minimum 51% from Post-consumer recycled (PCR) sources.

Trioplast has a market-leading role in climate-smart packaging through its sustainability concepts Triolean™ (downgauging with sustained or increased performance), Triogreen™ (products based on renewable raw materials) and Trioloop™ (products made from recycled plastic). Using PCR material in a stretch film is a ground-breaking move that represents a major step forwards in transitioning transport packaging into a circular economy.

Magdalena Bengtsson, product manager for pallet stretch film at Trioplast, underlines Trioplast's long experience of products based on recycled material. This gives us a major advantage now that we are transferring this knowledge to more product areas within increasingly advanced applications. Last year, for example, we were the first company in the world to present a PCR-based agricultural stretch film.

At Trioplast and in a circular economy, used plastic is not a waste material but rather a resource to be used over and over again.

WE ARE REUSERS

**TRIO
LOOP**
RECYCLED POLYETHYLENE

**75% Recycled content
where of minimum 51% PCR.**
